Help Eliza, the millionaire heiress of the Roach family, grow her room as much as possible through the bizarre and often frustrating tasks she will send you. You must collect 40 out of 80 individual objects and make sure they fit together properly. That can be tricky, but you will find the most difficult rooms are filled with opportunities to improve your collection and gain points. How to play After every completed room, you will receive a score and room points. The higher your score, the more items you will have in your inventory. But playing the game is not only about collecting as much as possible. Using the items in your inventory is just as important. Eliza will send you to different rooms, and you have to place the items in the right positions. You will even find some rooms that have several different items that you must place correctly. Each room has its own challenges. Some rooms will only let you place 1 object on the floor, while others require more than 1 object, for example. But each item has a different weight. The position of an object on the floor influences its weight. The heaviest items will sink in soft dirt, for example, while the bottom of a box pushes it to the ceiling. To get to the next room, you have to find the right key and use it to open the door. But the pressure of the keys in your

inventory influences their weight and thus the position they will occupy. With the right weight of each key, you can place it on the bottom of the door, which opens it. That is the only way you can get to the next room. The more rooms you complete, the higher your score and the larger your room will become. Game Features: • 40 unique objects • 80 rooms to complete • iOS and Android • Game Center and OpenFeint • 19 achievements You've always wanted to play with objects in unusual places, but have never managed to find the correct tools. Enter The Room to Grow and change that. The game makes use of physics in an unusual way, which will not only cause a huge challenge, but also lead to some quirky moments. If you like puzzle games with a bit of strategy, Room to Grow is a perfect fit.Q: How to make a div around a image and center the image in the div?
