Microsoft DirectX Audio for Windows XP and Windows Vista In Microsoft DirectX, audio is divided into Windows ACM (Advanced COM-based) Audio and Windows DirectSound Audio. Windows ACM audio uses Windows DirectSound for the actual sound processing, and directly sends the audio to speakers or headphones. Windows Audio Architecture (WAA) was introduced in Microsoft Windows XP. The first main difference between WAA and DirectX is that WAA was made to support the interoperability with other multimedia software applications as well as providing the best quality audio. Windows ACM Audio in Windows XP Windows ACM Audio introduced several new features in Windows XP. One of these is "Multiple audio streams" which provides multiple audio streams in one application. This feature is available in the recording software such as "Sound Recorder", "Windows Audio Recorder", "Audacity" and "WaveLab". The feature enables the user to start the recording at any time, even during playing audio files. It also supports the surround sound audio.
