Entertainment We loved seeing Charles Chaplin's 1895 silent film in its pristine condition. The City View Theatre's first cinema opened in 1914 as Toronto's first picture show, and became the second largest theatre in the city, playing internationally-known Hollywood movies. Although it was advertised as a "talking cinema" for the first couple of years, after a few fire scares and the onset of the Great Depression, it became a silent picture house again. If you haven't heard of him...then you must've been living under a rock. Thank you for your response. I don't know if I'm living under a rock; I just haven't heard of him much either way. Why would believing in a God force you to believe he made the impostor a prophet unless you are an atheist? Athiest says God is superstitious, like the Tooth Fairy is superstitious (Not that I don't love and believe in the Tooth Fairy), isn't the capitalization of the word God an impostor's transgression? And, I'm not well versed in law, only history, so I have my own questions. If God wanted us to have a

trouble with a MemoryStream Currently writing a C# program using a MemoryStream in the format that a file is read in through a binaryReader.ToArray(). Passing the amemory stream to a FileWriter and then out to a device seems to be giving errors that the file is not saved correctly (i think) I am looking for any help here... :(This is my code below. MemoryStream MyStream = new MemoryStream(bytes); BinaryWriter BmpWriter = new BinaryWriter(MyStream); BmpWriter.Write(bytes); File.Flush(); File.Close(); var fs = new FileStream(@"\\.\PhysicalDrive8", FileMode.OpenOrCreate); var b = new BinaryReader(fs); var stream = new byte[b.BaseStream.Length]; b.Read(stream, 0, b.BaseStream.Length); fs.Seek(0, SeekOrigin.Begin); fs.Write(stream, 0, stream.Length); You can see that I am doing a file flush. The problem is that the file does not have a space taken up. When I look at my program using process explorer there has been a file written. When i look at my program using a File System viewer I have an empty file with 0 bytes in it. Has anyone faced this problem before? A: In your code, after the write of the binary bytes, there is a call to the method "File.Flush()". What I understood is that by calling "File.Flush()" the whole file is written. So, without calling "File.Flush()" the memory stream is not written in your disk. Remove this line "File.Flush()" to write the content of memory stream in the disk. I hope this helps you.
